

FACT SHEET

# Seclira® Pressurised Fly Bait

## The clear choice for fly control

### Application

Apply to solid structures such as walls, fences, benches and garbage bins as an area or band spray as described on the next page.

Avoid applying this product to dusty/dirty surfaces.

For season-long control, monthly applications may be required, depending on the situation and duration of the fly season.

### General description

Seclira® Pressurised Fly Bait is a new ground breaking, ready-to-use pressurised bait, enabling users to simply and precisely place bait where nuisance flies naturally go. Seclira Pressurised Fly Bait is powered by a unique, fast-acting active ingredient which, when applied to surfaces, dries clear and has no odour. Apply it to surfaces as a spot, or band treatment to control nuisance flies in seconds and provide up to 6-weeks residual efficacy.

### Features

Versatile pressurised, ready-to-use formulation

Dries clear and odourless

Fast-acting & highly efficacious

Long-lasting efficacy

### Benefits

Seclira Pressurised Fly Bait is easy to use and more convenient than other fly baits. Just take out the spray pack to delivering a precise formulation with no need for mixing. Targeted and precise treatments mean it can be used in more areas, particularly compared to granular baits.

Seclira Pressurised Fly Bait dries clear and odourless, ensuring applications are undetectable. This makes Seclira Pressurised Fly Bait perfect for use in sensitive areas like restaurants, bars and hotels where granular or other visible baits would cause concern.

Seclira Pressurised Fly Baits unique near field attractant will attract flies to land and feed on the treated surface, resulting in fast effective control which is more reliable than simply residual sprays alone.

Low-volume, targeted applications with Seclira Pressurised Fly Bait can control nuisance flies for 4–6 weeks.

# Seclira®

## Pressurised Fly Bait

Seclira Pressurised Fly Bait is not a conventional residual spray and therefore does not work by flies simply contacting a sprayed surface. The attractants within this bait mean that flies will be attracted to and subsequently attempt to feed on treated surfaces. They will then pick up a lethal dose. Because of this bait function, only portions of vertical surfaces need to be treated.

Situation	Pest	Critical Comments
<b>SECLIRA PRESSURISED FLY BAIT</b> is not a conventional residual spray and therefore does not work by flies simply contacting a sprayed surface. The attractants within this bait mean that flies will be attracted to and subsequently attempt to feed on treated surfaces; they will then pick up a lethal dose. Because of this bait function, only portions of vertical surfaces need to be treated.		
<b>Building Exteriors &amp; Surround:</b> Abattoirs, poultry farms, animal housing, domestic dwellings, garbage containers, food processing plants and other industrial and commercial areas.  <b>Interior:</b> Commercial and industrial facilities and animal houses.	Nuisance flies including:  Adult houseflies (Musca domestica) and Lesser houseflies (Fannia canicularis), and  Sheep blowflies (Lucilia cuprina)	Spray surfaces where flies rest. Best results are achieved when applied to non-porous surfaces.  <b>Area Treatment:</b> Point can toward target area from a distance no further than 30 cm and press down actuator. Make a light application at a rate of 60 cm/sec and avoid run off or dripping from targeted area. Area treatments are effective where flies congregate, roost and feed, which may include garbage receptacles and lids, refuse containers, under tables and benches, recycling bins, dumpsters, behind vending machines, plant/flower pots, under bars, eave areas, walls and/or areas where flies like to congregate or infest.  <b>DO NOT</b> apply bait in areas that are frequently cleaned. This product will not adhere to surfaces that are dusty or greasy. Reapply when reinfestation occurs.  <b>Band Treatment:</b> Spray from a distance of no further away from targeted area than 15 cm to create a band application at a rate of 60 cm/sec. Band applications may be made to areas such as beam edges, receptacle edges, table or bench edges, around windows and window frames, under narrow eaves and other areas where there is a narrow area where flies land, roost and/or are likely to infest. Reapply when reinfestation occurs.  <b>Note:</b> Around feedlot manure heaps  <b>DO NOT</b> apply bait on manure heaps or dispose of treated targets with manure.  <b>See also Note on Application below.</b>
