INSECTRAC[®]

Ephestia Plodia Long-Life Multi Coloured Lures

Available in assorted colours to ensure proper rotation of lures.
Use a different coloured lure on each service.

A full range of lures available including *Lasioderma serricorne*.

Unitrap Funnel Trap System

This is the original Unitrap, designed and manufactured by IPS.
The funnel entrance is positioned at the top beneath a covering lid.
These traps are a better option than the delta trap when trapping in dusty conditions and when moth pests are particularly large.

Sticky Boards for Funnel Traps (25 per pack)

A sticky board shaped so that it can be inserted in to the base of The Unitrap. This reduces escape rates and can increase visual contrast - an important factor in attracting many insect pests.

Delta Trap (Kit = 1 trap + string + 2 boards)

Delta traps come flat packed and are heat welded to ensure durability. A textile tie is provided for easy hanging.

Lures sold separately

Cockroach Trap (10 Traps + 10 Attractant tabs)

Specifically designed to monitor or control cockroach pests.
These traps can also be used for a number of beetle pests such as tobacco beetle with the addition of a *Lasioderma serricorne* lure.

Muscatrap Disposable Fly Trap with Lure

The Muscatrap is an economical disposable trapping solution for problematic Muscid and Calliphorid flies, including the house fly.
A mix of MuscaTract powder and water is added to the trap to attract flies. Once full, dispose of thoughtfully.
